

NETENG MAJOR ASSIGNMENT

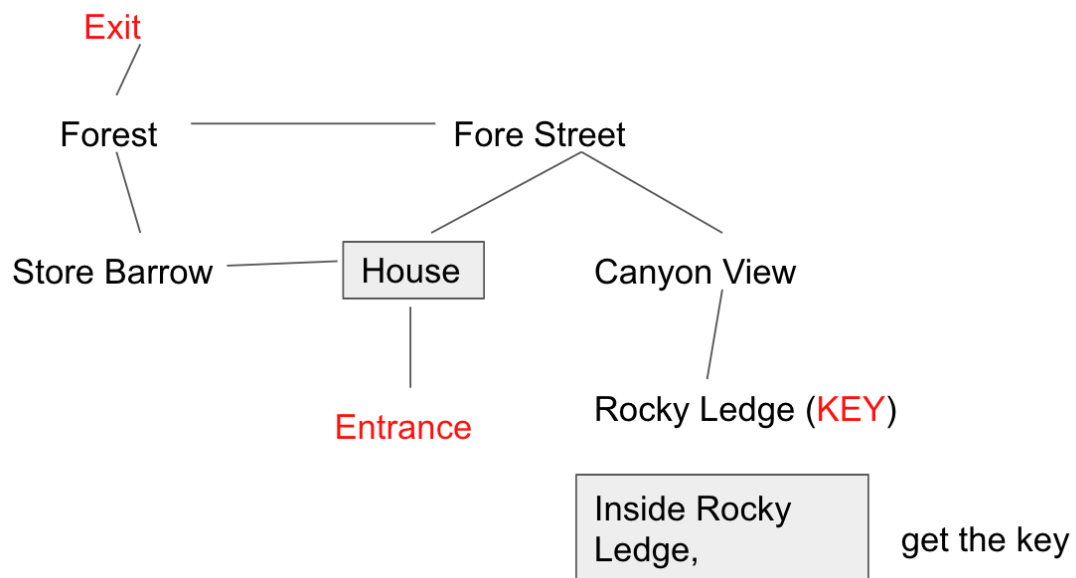

Shell-Script Text Adventure

[Abstract](#)

This is an introduction of mini game which development by Bash.

NETENG MAJOR ASSIGNMENT

I chose to design small shell-based games. The content of the game is that at first, the player is in a small house and needs to guess and find the key in the house. By entering the east, west, south, and north on the command line to achieve player movement. After finding the key, you can clear the puzzle through the puzzle maze. Below is the maze map when I designed this mini game.

he departure is at the south of the house. Players need to find the key first, and then find the mouth. If the entered command goes outside the map, it will return to the starting point and start over.

I will attach the simplest and fastest decryption steps at the end.

I give permission for my assignment to be shared by teachers, as part of the peer evaluation.

The simplest decryption step is: east east south south inside north north west west north
north
